

Amine MEKKI

AI/ML Engineer

(+33) 6 23 79 56 81 | amine.mekki.contact@gmail.com | Lille, France

[My Portfolio](#) / [My LinkedIn](#) / [My GitHub](#)

PROFESSIONAL SUMMARY

AI/ML Engineer focused on Generative AI, Machine Learning, and MLOps. I build smart solutions from start to finish, from creating AI agents and search systems (Agentic-RAG) to deploying them into production. I love turning complex data into automated, reliable AI tools.

SKILLS

- **Programming & Scripting:** Python, R, SQL, JavaScript, Go
- **Machine Learning & AI:** Scikit-learn, TensorFlow, PyTorch, Hugging Face, LangChain
- **Data & Databases:** PostgreSQL, MongoDB, Redis, Pinecone, Qdrant, Snowflake, Spark, Dask
- **MLOps & Deployment:** Docker, Kubernetes, MLflow, DVC, ZenML, GitHub Actions, Apache Airflow, Apache Kafka
- **Visualization & Analytics:** Pandas, NumPy, Matplotlib, Seaborn, Plotly
- **Cloud & Infrastructure:** AWS, Azure

EXPERIENCE

AI Engineer - GENFIT

November 2024 - NOW

- Developed backend components and intelligent agents (OpenAI Agents SDK with custom tools) for generative AI web applications addressing complex internal use cases. Qdrant as vector database.
- Supported the deployment of Microsoft Copilot and built lightweight agents for simpler automation scenarios.
- Improved existing computer vision pipelines for histological tissue analysis and cell counting, reducing processing time by 30% while making the codebase scalable and modular

AI Engineer - SANOFI

Sept 2023 - Aug 2024

- Helped design and integrate an intelligent agents (With LangGraph).
- Built custom tools enabling agents to produce well-formatted tables and charts.
- Developed data pipelines to extract and clean information from Excel files for downstream analysis.
- Designed and deployed backend endpoints (FastAPI) so the frontend team could seamlessly access AI/DS services.
- Integrated and evaluated two vector databases (Pinecone and Redis), including performance benchmarking and logic integration, to select the most suitable solution.

Data Scientist - VAISALA

Apr 2023 - Sept 2023

- Conducted market research and built ML models to support decision-making.
- Developed ML methods for **sensor calibration** and **aerosol classification**.

PROJECTS

Agentic Company Platform – [Github Link](#)

- Built an internal agentic AI platform with a FastAPI backend and React frontend. Configurable LangGraph agents power a real-time chat interface with SSE streaming.
- Implemented a production RAG pipeline using Qdrant hybrid search, FastEmbed embeddings, and Cohere/BGE reranking. Documents are ingested from S3, Notion, and uploads via Celery workers (more to come).
- Integrated secure enterprise connectors for Jira and Notion with Fernet-encrypted credentials. Agents dynamically bind tools and knowledge sources scoped by admin configuration.

EDUCATION

Engineering Degree in Computer Science, AI, and Data Science

- IMT Mines Alès
